

Alumni Profile

Alexander Chapman '21
Specialization in Environmental
Education

I am currently attending the Johns Hopkins Bloomberg School of Public Health in Baltimore, Maryland where I am studying for a Master of Health Sciences from the Department of Environmental Health and Engineering. The program is a one-year program, so it is nice for students who are looking to get a master's degree and also want to quickly get into the workforce.

The program is interdisciplinary allowing me to take classes from many different departments within the school. My schedule includes toxicology, principles of public health, environmental health, food systems, global climate, health literacy, and more. There is a strong focus on climate change and environmental justice within environmental health.

My time in the EVST program at SU exposed me to climate change in such a way that I feel at an advantage in my Johns Hopkins program. The capstone essay for EVST 4900 set me up nicely for the grad program as I need to complete a similar formal literature review as a graduation requirement. Overall, my graduate school experience encourages me to explore environmental issues more broadly and more in depth, ecologically and anthropogenically. Graduate school has also been a great place to meet likeminded people and make connections that will help me in my future career.
